described in AAR62992-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                         0;

                                                                                                                                                                                                                                                                                 0; Gaps
                                                                                                                                  AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR62992-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the retainent of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                 Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pro-urokinase, thrombolysis, fibrin clot lysis, mutant Hisll3, reduced fibrinogenolysis, non-specific plasminogen activation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR6292-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can activity and non-specific plasminogen activation. The mutants can systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                         Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pro-urokinase; thrombolysis; fibrin clot lysis; reduced fibrinogenolysis; non-specific plasminogen activation; systemic bleeding; mutant Serl75·Hisl87.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              100.0%; Score 793; DB 16; Length 411; 100.0%; Pred.                                                                                                                                                                                                                                                                      AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR62992-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                         Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pro-urokinase; thrombolysis; fibrin clot lysis;
reduced fibrinogenolysis; non-specific plasminogen activation;
systemic bleeding; mutant Ser175 His187 Ala313.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR62992-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 411;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 SNELHQVPSNCDCLNGGTCVSNKYFSNIHWCNCPKKFGGQHCEIDKSKTCYEGNGHFYRG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR62992-R63008 were derived. These mutants retain the thromboblytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                        Pro-urokinase; thrombolysis; fibrin clot lysis;
reduced fibrinogenolysis; non-specific plasminogen activation;
systemic bleeding; mutant Ser175 His187 His313.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 793; DB 16; Length 411; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR62992-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR62992-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lypis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                                                                                Pro-urokinase; thrombolysis; fibrin clot lysis; reduced fibrinogenolysis; non-specific plasminogen activation; systemic bleeding; mutant Ser175 His187 Gly306 Ala313.
                                                                                                                                           Pro-urokinase mutant Ser175 His187 Gly306 Ala313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (NEWE-) NEW ENGLAND DEACONESS HOSPITAL.

AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR6292-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the retained treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                                                      Pro-urokinase; thrombolysis; fibrin clot lysis; reduced fibrinogenolysis; non-specific plasminogen activation; systemic bleeding; mutant Serl75 His187 Ala300 Ala301 Ala313.
                                                                                                               Pro-urokinase mutant Ser175 His187 Ala300 Ala301 Ala313.

actvity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                 Pro-urokinase; thrombolysis; fibrin clot lysis; reduced fibrinogenolysis; non-specific plasminogen activation; systemic bleeding; mutant Ser175 His187 Ala300 Ala301 His313.
                                                                                       Length 411;

These mutants retain the thrombolytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                reduced

                                                                                                                                                                          Gaps
                           AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR62992-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the treatment of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                         0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                 AAR62991 is the wild type pro-urokinase, from which the new mutants described in AAR62992-R63008 were derived. These mutants retain the thrombolytic activity of the wild type protein, useful for the retainent of thromboembolism, but have a reduced fibrinogenolysis activity and non-specific plasminogen activation. The mutants can therefore be used for the lysis of fibrin clots without inducing systemic bleeding, as can be the case with the wild type protein. (Updated on 25-MAR-2003 to correct PN field.)
                                            Pro-urokinase mutants - have thrombolytic activity but reduced fibrinogenolysis activity and non-specific plasminogen activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 411;

Nature Coultwee Lot, 1.0.1; Verbinan, 1.1; Fauntenoee, 1.1.

Nation Coultwee Lot, 14214-14218, 1986

A; Reference number: A37567; NUID:87033611; PMID:3021732

A; Contents: annotation; fibrin binding site

R; Verheijan, J.H.; Caspers, M.P.M.; Chang, G.T.G.; de Munk, G.A.W.; Pouwels, P.H.; Engressed J. 5, 3525-3530, 1986

A; Title: Involvement of finger domain and kringle 2 domain of tissue-type plasminogen of the Reference number: A37568; MCID:87161761; PMID:3030730

A; Contents: annotation; fibrin binding site

R; Dodd, I.; Nunn, B.; Robinson, J.H.

Tromb. Haemost. 59, 523-528, 1988

A; Title: Isolation, identification and pharmacokinetic properties of human tissue-type A; Reference number: A60902; MUID:89044681; PMID:3142086

A; Contents: annotation; novel forms of expressed recombinant t-PA

R; Patris, T.J.B.; Patrel, T.; Marston, F.A.O.; Little, S.; Emtage, J.S.; Opdenakker, G. Mol. Biol. Med. 3, 279-222, 1986

A; Title: Cloning of cDNA coding for human tissue-type plasminogen activator and its expansions. A page 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 and 1.1 an

coagulation factor XIIa (EC 3.4.21.38) precursor - bovine (fragment)
NyAlternate names: Hageman factor (activated)
Cispecies: Bos prindgenius taurus (cattle)
CjDate: 10-Apr-1995 #sequence_revision 22-Apr-1995 #text_change 21-Jan-2000
CjAccession: 845281, A61329

C;Species: Desmodus rotundus (common vampire bat)

C;Species: Desmodus rotundus (common vampire bat)

C;Species: Desmodus rotundus (common vampire bat)

C;Species: Desmodus rotundus (common vampire bat)

C;Species: Desmodus rotundus (common vampire bat)

C;Accession: 35060

R;Kraetzschmar, J; Haendler, B.; Langer, G.; Boidol, W.; Bringmann, P.; Alagon, A.; Don Gene 105, 229-237, 1991

A;Title: The plasminogen activator family from the salivary gland of the vampire bat Des A;Reference number: J50697; MUID:92039036; PMID:1937019

A;Reference number: J50600

A;Molecule type: mRNA

A;Residues: 1-394 «KRA>

A;Residues: 1-394 «KRA>

A;Residues: 1-394 «KRA>

A;Rote: the authors translated the codon ATC for residue 75 as Thr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      plasminogen-related protein precursor homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Dlasmin (EC 3.4.21.7) precursor - goat (fragments)
Nylternate names: plasminogen
Cyspecies: Capra a aegagush hircus (domestic goat)
Cybacies: Capra a egagush hircus (domestic goat)
Cybaces: Capra a egaguene hircus (domestic goat)
Cybacesion: C61545

Submitted (APR-1992) to the EMBL/GenBank/DDBJ databases.
-!-CATALYTIC ACTIVITY: Specific cleavage of Arg-[-Val bond in plasminogen to form plasmin of the MOLECULAR MASS FORMS. EACH CONSISTS OF TWO CHAINS, A AND B. THE HIGH MOLECULAR MASS FORM CONSISTS OF TWO CHAINS, A AND B. THE HIGH MOLECULAR MASS FORM CONSISTS OF TWO CHAIN A. CLEAVAGE OCCURS AFTER RESIDUE 1S6 IN THE LOW MOLECULAR MASS FORM TO YIELD A SHORT AI CHAIN (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.
-!- SIMILARITY: Contains 1 kringle domain.
-!- SIMILARITY: Contains 1 EGF-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DR InterPro; PRO101314; Chymotrypsin.

-!- CATALYTIC ACTIVITY: Specific cleavage of Arg-|-Val bond in plasminogen to form plasmin.
-!- CATALYTIC ACTIVITY: A NU BE THE HIGH MOLECULAR MASS FORMS. EACH CONSISTS OF TWO CHAINS, A AND B. THE HIGH MOLECULAR MASS FORM CONTAINS A LONG CHAIN A. CLEAVAGE OCCURS AFTER RESIDUE 156 IN THE LOW MOLECULAR MASS FORM TO YIELD A SHORT AI CHAIN (BY SIMILARITY).
-!- SIMILARITY: DELONGS TO PEPTIDASE FAMILY SI.
-!- SIMILARITY: Contains 1 BGF-like domain.
